

URTSI II Universal RTS Interface

OVERVIEW:

The Universal RTS Interface II (URTSI) is an integration device that allows third party systems to control Radio Technology Somfy® motorized applications. The URTSI can control up to 16 RTS channels individually and/or as a group through RS232, RS485 and IR. Multiple URTSI's can be joined together to control up to 256 channels using the RS485 expansion port. The simple design allows you to quickly duplicate programming from existing RTS transmitters.
